About Me

Software Engineering student at Tekup with a builder's mindset. I enjoy turning complex requirements into clean, functional code—whether it's an AI-powered learning platform or a clinic management system. Currently seeking a challenging internship where I can contribute to real-world projects and grow alongside experienced engineers.

Education

Tekup University

Software Engineering (Génie Logiciel et Systèmes d'Information)

2025 – Present

Tunis, Tunisia

Institut Supérieur d'Informatique et de Multimédia de Gabès (ISIMG)

Licence en Informatique et Multimédia

2022 – 2025

Gabès, Tunisia

Professional Experience

IResCoMath Lab

2024

Research Lab Management System (Graduation Project)

- Developed a full-stack management system with **JWT** authentication, handling user roles, publication tracking, and member administration.
- Built a responsive frontend using **React.js** and **React Router**, managing state efficiently with **React Hooks**.
- Designed a **RESTful API** (Node.js/Express) and integrated a custom **XML** parser to ingest publication data from **DBLP.org**.

Mammut Web Solutions

2023

Mobile Development Intern

- Developed a **Flutter** mobile quiz application for medical professionals to reinforce domain knowledge.
- Implemented intuitive UI/UX using **Flutter Widgets** and connected the frontend to a custom **Node.js** backend.

Projects

LearnAI Hub — *Next.js, TypeScript, MongoDB, Gemini AI*

2026

- Engineered a full-stack e-learning platform with **Role-Based Access Control (RBAC)** (Admin, Instructor, Student) using **NextAuth.js** and **JWT**.
- Integrated **Google Gemini AI** to power a context-aware course assistant chatbot, enhancing student engagement.
- Automated certificate generation using **jsPDF** and **html2canvas**, enabling downloadable PDF certificates upon course completion.
- Designed scalable **MongoDB** schemas with **Mongoose** to manage dynamic courses, quizzes, and enrollment progress.

Enterprise EMS — *Spring Boot, Java, MySQL, Thymeleaf*

2026

- Built a monolithic HR management system using **Spring Boot 3** and **Spring Security** to handle leave requests, department tracking, and employee directories.
- Implemented strict **RBAC** with **JWT** authentication, creating distinct portals for Admin, HR, Manager, and Employee roles.
- Developed server-rendered UIs with **Thymeleaf** and streamlined backend data flow using **Spring Data JPA**, **DTOs**, and **Lombok**.

HealthCare System — *Symfony, PHP, Doctrine, MySQL*

2025

- Developed a clinic management platform to digitize appointment booking, prescription handling, and patient records.
- Enforced data isolation with **Symfony Security Voters**, ensuring Doctors access only their assigned patients and appointments.
- Accelerated admin workflows using **EasyAdmin Bundle** for rapid CRUD interface generation.
- Managed secure file uploads for medical documents via **VichUploaderBundle** and maintained schema versioning with **Doctrine Migrations**.

Technical Skills

Languages: Java, TypeScript, JavaScript, Python, PHP, Dart
Frameworks & Libraries: Next.js, React, Node.js, Spring Boot, Symfony, Flutter, Tailwind CSS
Databases: MongoDB, MySQL, PostgreSQL
Tools: Git, GitHub, Postman, Docker (basic), Figma

Involvement

- 2022-2023: AIESEC — International Student Association

Languages

- Arabic (Native) — French (Fluent) — English (Professional)
